

## Importing Libraries

The first step is usually importing the libraries that will be needed in the program.

```
5
6
7  from flask import Flask,render_template,request
8  # Flask-It is our framework which we are going to use to run/serve our application.
9  #request-for accessing file which was uploaded by the user on our application.
10 import os
11 import numpy as np #used for numerical analysis
12 from tensorflow.keras.models import load_model#to load our trained model
13 from tensorflow.keras.preprocessing import image
14 import requests
15
```

Importing the flask module into the project is mandatory. An object of the Flask class is our WSGI application. Flask constructor takes the name of the current module (`__name__`) as an argument Pickle library to load the model file.
